Master Thesis - Security Aspects in Virtual Networks
SITREP 8

Laurent De Wilde

Master of Science in the Applied Computer Science

Vrije Universiteit Brussel

March 2, 2015

Work done

This is an overview of the work performed in the past week:

- Second chapter finished that provides an in-depth explanation about virtualization.

- Third chapter started about security issues in virtual networks.

Planning

This week, I would like to finish chapter 3.

Problems

No problems encountered.

Issues

No issues encountered.

Assistance

By the end of this week, (when my theoretical study is finished), I most likely will sent the Professor an e-mail to make an appointment to review my work so far and to discuss the practical testing that needs to be performed.

However, due to project work for other courses, this email could be delayed, but I will try my best to finish chapter 3 this week.
