Master Thesis - Security Aspects in Virtual Networks
SITREP 1

Laurent De Wilde

Master of Science in the Applied Computer Science
Vrije Universiteit Brussel

November 17, 2014

1 Work done

On Friday November 14, I had an appointment with Prof. M. Timmerman to discuss some practical details about the first steps to start the thesis. This is an overview of the accomplished work:

- Saturday November 15: installation and resetting of the Netgear router, as well as some first configuration of the router. Of course, I downloaded the documentation/manual of the appropriate router. I set up a temporary tiny network at home to configure the router consisting of the router, a switch and my laptop.

- Sunday November 16: continued the configuration of the router and read the PhD proposal of Joseph.

2 Planning

This week I expect to provide an answer to the question of how many IP addresses I will need. Most likely, the answer will be 1. Normally, the configuration of the router should be completed by the end of this week. Also, I will make an appointment with Fei Guan concerning the installation of the 'pizza servers'.

3 Problems

No problems have been encountered so far.

4 Issues

For now, no issues have been encountered.

5 Assistance

I will probably need some assistance of Fei Guan to install the 'pizza servers'.
